

eTech SMART EPC

“The market-leading handheld EPC and site note generation tool”

The SMART EPC PDA tool is perfect for busy DEAs looking to electronically complete reports when on-site. It enables data to be electronically uploaded into an EPC and provides access to key components, including the Boiler Efficiency Database. It also houses an inbuilt camera so you can take images whilst on-site and the integrated clipboard means manual notes or sketches can be included if required.

The PDA replicates data from your office PC and from the Quest panel management system onto the handheld device so all new appointments are visible and no re-keying of data is required.

The Smart EPC solution operates on a range of devices and through all mobile network operators, providing you with complete choice.

Why use SMART EPC?

- Generate additional income through the SMART Floor Plan module
- Streamline work practice
 - Enables you to focus on the quality of your inspections
 - Removes the monotony of EPC report writings, scanning of site plans and field sheets, and uploading of annotating photos
- Maintain professional standards by lodging professionally completed reports
- Support in the field - with access to industry databases and alerts made if a section of the report is omitted
- Enables you to complete one additional EPC per day, due to the efficiencies created
- Solution approved by BRE Scotland

SMART Floor Plan

- SMART Floor Plan enables DEAs to generate full floor plans with property descriptions on-site using the SMART EPC handheld PDAs.
- Plans are developed room by room on the PDA, measuring and shaping rooms as you go. A full range of building components can be added from pictorial symbols.
- SMART Floor Plan downloads the plan from the PDA to a Desktop application where further alterations can be made if required. Completed floor plans can then be emailed to your client or accessed by them on-line.

For further information on the range of EPC tools and software available from Quest, call 0844 844 9969 or visit www.questuk.com.
